1 The results are based on the surveying of standard double hotel room prices of 3, 4, 5-star hotels and guesthouses in 10 regions of Georgia. Hotels were chosen arbitrarily according to random sampling principle. The study contains 71% (312) of all 3, 4 and 5-star hotels and 25% (456 guesthouses) of all guesthouses registered on www.booking.com The 3, 4 and 5-star hotel price data was collected by contacting hotels individ-

ually, while the prices of guesthouses were taken from booking.com. The average prices are arithmetic mean of standard double hotel room prices.
2 Guesthouse: a type of accommodation that is characterized by having a small number of rooms and services are usually offered by the resident family.
3 The calculation of the hotel price index is based on the recommendations given by the Interna-

tional Monetary Fund (IMF). The elementary aggregate price index is calculated by Jevons index (Consumer Price Index Manual-Theory and Practice (2004), Practical Guide to Producing Consumer Price Indices (2009)).
